DETAILED ACTION

Preliminary Amendment

1. In the preliminary amendment, Applicant cancels claim 1. In the remarks section, Applicant references that claims 1-5 are canceled. Correction to the preliminary amendment is required.

2. Examiner considered application with claims 6-24 as though claims 1-5 were canceled correctly.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Art Unit: 2622

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claim 6-24 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 11-19 of U.S. Patent No. 6,106,651. Although the conflicting claims are not identical, they are not patentably distinct from each other. In claim 6 of the current, the applicant uses the phraseology "a method of bleed-printing, comprising acts of: inserting a product to be printed into a printer, the product being attached to a carrier that is larger, in at least one dimension, than the product; bleed-printing on the product so that the printed matter extends beyond at least one edge of the product; and removing the product from the carrier" which can be interpreted to be a broader statement of "a method of bleed-printing, comprising the steps of: attaching a product to a carrier, at least one dimension of the carrier being larger than at least one dimension of the product ; bleed-printing matter on the product and on the carrier so that the printed matter extends from the product onto the carrier; and removing the product from the carrier" which can be interpreted to be a broader statement" as stated in claim 15 in the previously issued patent {U.S. 6,106,651}.

In claim 7 of the current, the applicant uses the phraseology "wherein, the product is attached to the carrier by an adhesive, and wherein after the act of removing, the product is substantially free of tacky residue from the adhesive" which can be interpreted to be a broader statement of "wherein, in said attaching step, said product is

Art Unit: 2622

attached to said carrier in such a way that, after the removing step, the product is substantially free of tacky residue" which can be interpreted to be a broader statement" as stated in claim 16 in the previously issued patent {U.S. 6,106,651}. These are only a few noted points of obviousness.

Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during the prosecution of the application which matured into a patent.
